Heifer Pregnancy Rate (HPR) - A heifer's potential to conceive during breeding season, relative to other heifers. A higher value is desired.

Residual Feed Intake (RFI) - This is an indicator of feed efficiency. It is the difference in animals' daily consumption of feed to achieve the same level of daily gain. Lower RFI indicates greater feed efficiency.

Tenderness (TEND) - Genetic potential for beef tenderness (Warner-Bratzler Shear Force). A higher 1-10 score is more tender.

Hot Carcass Weight (HCW) - Unchilled weight of a beef carcass. The higher the HCW, the greater the dressing percentage.
